2. BACKGROUND INFORMATION

2.1. INTRODUCTION AND BACKGROUND

2.1.1. Infrastructure South Africa

Infrastructure South Africa (ISA) is a government agency responsible for coordinating and driving South Africa's infrastructure investment programme with the objective of improving infrastructure planning, investment, and delivery. ISA derives its mandate from the Infrastructure Development Act, 2014 (Act No. 23 of 2014), which provides for the facilitation and coordination of public infrastructure development that is of significant economic or social importance to the Republic. The Act seeks to accelerate the planning, approval, and implementation of strategic infrastructure projects through enhanced coordination across all spheres of government.

As part of its mandate, ISA supports project preparation activities aimed at developing a pipeline of bankable and investment-ready infrastructure projects. To fulfil this role effectively, ISA collaborates with implementing and financing partners that possess the technical, commercial, financial, and project development expertise required to advance infrastructure projects through the preparation phase.

In support of these objectives, the Presidential Infrastructure Coordinating Commission (PICC) Technical Task Team, housed within the Industrial Development Corporation (IDC) and operating under its governance framework, provides technical and strategic support to infrastructure development initiatives and contributes to the advancement of national infrastructure priorities.

2.1.2. Gauteng Department of Cooperative Governance and Traditional Affairs, Gauteng Local Municipalities and the Gauteng Infrastructure Funding Agency

Gauteng municipalities are currently facing a dual challenge of deteriorating waste management infrastructure and chronic energy insecurity, driven by rapid urbanisation, population growth, and increasing pressure on municipal services. The province's waste management system is under significant strain, with several landfill facilities approaching their design capacities. A 2014 study indicated that approximately 394,969 tonnes of waste per annum were disposed of at landfill sites within the Sedibeng region and approximately 378,436 tonnes per annum within the West Rand region. These constraints have contributed to increased illegal dumping, environmental degradation, growing compliance obligations, and escalating landfill management costs.

At the same time, municipalities across the province continue to experience electricity supply constraints and recurring load-shedding, highlighting the need for sustainable, reliable, and affordable energy solutions that can strengthen municipal energy resilience.

The Alternative Waste Treatment Technology Gauteng Local Municipalities Programme (AWTT Programme) has been established as an integrated response to these challenges. The programme seeks to leverage alternative waste treatment technologies to reduce reliance on landfill disposal while simultaneously generating electricity and other energy products from available waste streams.

The programme is sponsored by the Gauteng Department of Cooperative Governance and Traditional Affairs (CoGTA), whose mandate includes supporting and strengthening municipal capacity to deliver essential services, infrastructure, and environmental management programmes. For the purposes of this programme, CoGTA is acting on behalf of the participating Gauteng local municipalities to coordinate a provincial response to the waste management and energy challenges facing these areas. The participating municipalities are:

- Emfuleni Local Municipality
- Lesedi Local Municipality
- Midvaal Local Municipality
- Merafong City Local Municipality
- Mogale City Local Municipality
- Rand West City Local Municipality

The programme is further supported by the Premier's Energy Emergency Council and is being implemented in collaboration with key technical and infrastructure development partners, including the Gauteng Infrastructure Funding Agency (GIFA), to support the development of sustainable, bankable infrastructure projects capable of attracting both public and private sector investment.

Recognising the strategic nature of the programme and its potential contribution to both improved waste management and enhanced energy security, ISA has agreed to support the project preparation process. Through its partnership with IDC, ISA will facilitate the development of the feasibility studies, business cases, and implementation strategies required to progress the programme towards funding, investment, and implementation.

2.2. PROPOSED SOLUTION

The proposed solution seeks to utilise available municipal and other suitable waste streams to generate electricity and other energy products, thereby providing participating municipalities with a sustainable, affordable, and reliable source of energy. In addition to addressing electricity supply instability, the programme aims to reduce the volume of waste disposed of at landfill sites, extend landfill life, reduce environmental impacts, and improve the overall management of municipal waste.

The AWTT Programme is therefore intended to provide an integrated solution to the interconnected challenges of waste management and energy security by implementing alternative waste treatment technologies that generate environmental, economic, and social benefits for participating municipalities and the broader Gauteng Province.

2.3. PROJECT OBJECTIVES

The primary objective of the AWTT Programme is to develop comprehensive feasibility studies and an Intermediate Business Case that will support investment decision-making and the implementation of the programme. This will include:

- i. Undertaking a status quo, market, and demand analysis, including a comprehensive Cost-Benefit Analysis covering the economic, social, and environmental costs and benefits for:
 - Emfuleni Local Municipality
 - Lesedi Local Municipality
 - Midvaal Local Municipality
 - Merafong City Local Municipality
 - Mogale City Local Municipality
 - Rand West City Local Municipality
- ii. Assessing opportunities, where applicable, to integrate and interface with waste management projects within Gauteng metropolitan municipalities as part of the options analysis.
- iii. Analysing and confirming the preferred technical solution(s) for the identified project sites.
- iv. Developing a funding and financing strategy supported by a financial model that identifies and assesses all potential revenue streams associated with the preferred technical option(s).
- v. Demonstrating the economic viability and value for money of the proposed programme.
- vi. Assessing alternative delivery models for the programme, including screening the preferred solution in accordance with National Treasury regulations.
- vii. Preparing an Intermediate Business Case in accordance with the 5-Case Model and developing funding applications for relevant funding mechanisms, including the National Treasury Budget Facility for Infrastructure (BFI).

To support these objectives, the IDC, on behalf of ISA, intends to appoint a suitably qualified and experienced service provider with proven expertise in transaction advisory services, including technical, financial, commercial, and legal advisory capabilities. The appointed service provider will be responsible for developing comprehensive feasibility studies and business cases for renewable energy, waste management, and alternative waste treatment infrastructure projects.

2.4. DOCUMENTS TO BE FURNISHED TO THE APPOINTED SERVICE PROVIDER

- Outcomes of the 2014 Pre-Feasibility Study for the Sedibeng and West Rand District
- ISA Greenbook Business Case Guideline
